### Program

**TARGET AUDIENCE: ALL GRADE 4-9 TEACHERS ARE ENCOURAGED TO ATTEND**

Dr. David Orr tells us that "Given the vulnerable state of our natural world, we need a different approach to education" - one that develops students who are not only knowledgeable but also environmentally and socially conscious.

What knowledge and competencies do Alberta students need to create a sustainable future? How can we help them develop environmental stewardship and citizenship?

We'll share the Curriculum for a Sustainable Future that you can use to enhance your own teaching, showcase inspiring classroom stories, share resources, and identify grants to help turn your ideas into actions.

*This learning opportunity is being offered through curriculum implementation funding from Alberta Education.*

### Presenters

**Marie Tremblay**

joined the Alberta Council for Environmental Education in 2018 as senior education advisor, bringing to her role a dual passion for education and the environment. With university degrees in engineering, education, environmental design (Master's) and ecology (PhD), it's fair to say she also has a passion for learning. Marie's professional experience includes over a decade of teaching in a variety of settings from grade 1 to university level, including five years in

Indigenous communities of Canada's far north. Marie has also been an active member of Alberta's environmental community for over two decades as a graduate student and conservation scientist in the government and non-profit sectors. Marie is particularly passionate about developing critical thinking skills and sustainability competencies through environmental and climate education.
