Program

GRADES 10 & 11 MATHEMATICS TEACHERS ARE ENCOURAGED TO ATTEND.

More Function Sorts! Back by popular demand...if you missed the linear, exponential, and quadratic sorts; join us to explore and receive those classroom materials. If you have those materials from last year, join us to see the new function sorts created for logarithmic, sinusoidal, cubic and other transformations of all functions. Join us for the fun explorations and great teacher conversations about student misconceptions and constructive learning.

This learning opportunity is being offered through a grant from Alberta Education.

Presenters

Rosalind Carson

has a B.Ed. in Secondary Mathematics, B. Sc. In Mathematics, and a M. Sc. In Curriculum, Teaching and Learning Mathematics. Rosalind started her career as a High School Mathematics teacher, followed by a leadership role developing and facilitating professional development for secondary mathematics and science teachers. She is now an independent mathematics consultant for Mobius Connections. The key focus for all of her mathematics education work has been to develop and share creative and constructive mathematics activities.

**Providing Quality Professional Learning
Opportunities to K-12 Education Staff**
